

MISSISSIPPI PARENTS FOR VACCINE RIGHTS

#BETHEVOICE | #HEALTHFREEDOM | MPVR.ORG

Mississippi Parents for Vaccine Rights (MPVR) champions state and federal laws that advocate the basic human right of parents to be the final authority in their children's healthcare, especially vaccinations. We are focused on defending the freedom of informed voluntary consent.

- In 1986 vaccine manufacturers and healthcare providers were indemnified by the Federal Government and could no longer be held liable in a civil court of law for vaccine induced injury or death. Since that time, the childhood schedule has more than quadrupled to 49 vaccine doses by kindergarten and 70+ by high school. With 271 vaccines in development, the schedule will only continue to grow.
- Dr. William Thompson, CDC Senior Scientist and a chief author of the CDC's 2004 study on the MMR vaccine and Autism, has released thousands of discarded documents showing that vaccines are indeed causing Autism, most significantly in black baby boys. Audio confession and all documents were made available to the public online, January 2016.
- Insurance companies and the government drive physicians to require patients to adhere to the recommended vaccine schedule with financial incentives and large bonuses dependent on quotas. Due to government and insurance company audits, pediatricians are terminating infants and children as patients in order to meet these quotas, leaving these children without healthcare.
- Mississippi boasts the most heavily vaccinated children in the United States, accomplished by implementing the most restrictive vaccine laws in the nation. This prohibition on freedom is certainly nothing to be proud of and MS is losing educated professionals in large numbers who refuse to transfer here, or who are taking their bright children with them and moving to our neighboring and other states.
- 47 healthier states allow parents to follow alternative vaccine schedules, offering religious and/or personal belief exemptions, since the beginning of vaccine mandates decades ago. Many vaccines are cultured on Aborted Fetal Cells as is stated on vaccine manufacturer package inserts. The Religious Liberty of parents in MS is being violated daily by our childhood vaccine mandates which offer no legitimate options.
- Childhood vaccines are the only one-size-fits-all medicine. We don't know how many is too many for a given child, as children are all different. Our childhood vaccine schedule as it is administered has never been studied for long term or synergistic effects.
- Canada, the UK, Germany, Ireland, Belgium, and several other countries have no mandated vaccines for school allowing free market to dictate vaccine uptake. Their children are healthier than ours, especially in MS. Coercing parents into compliance only serves to destroy trust by violating the principle of informed consent and creates further resistance.
